

GhostTraders

The New York Kill Zone is a trading strategy that integrates price and time, focusing on certain time intervals with high volatility. This approach enables traders to identify high-probability trading opportunities using institutional trading reference points like fair value gaps (FVG) or order blocks (OB).

Kill zones are broadly classified into two types: the London kill zone and the New York kill zone. While our focus here is on the New York kill zone, it's important to note that the concepts taught are equally applicable to the London kill zone

Time Frame:	30 minutes 15 minutes 5 minutes 1 minute
Institutional reference point:	Fair value Gap, Break Market Structure, Sell Side liquidity (SSL) + FVG, Buy Side liquidity (BSL) + FVG, Buy Side liquidity (BSL)
Model Type:	Intraday Trading Day Trading
Narrative:	Liquidity took out AFTER 07:00 am [New York Time]
Trading window:	Frame setup before 07:00 am [New York Time] Anticipating either SSL/BSL To Be Collected. Look for Fvg Entry During New York Kill Zone [07:00-10:00 am NYT]
Instructor:	GhostTraders

Recommended Broker	<u>ICMarkets</u> , Account Type : Raw Spread

Summary table of new york trading strategy

Time

- Prior 07:00 am Mark Previous Highs and Lows Were Price Is Mostly Likely To Collect Liquidity.
- After 07:00 expect either BSL/SL To be collected and start hunting for setup formation
- From New York Kill Zone[07:00-10:00]Look FVG entry After Liquidity Has Been Collected
- Landon Close Profit Taking Hour is 10:00-11:00 [Mostly we see a major Retracement during this time, therefore, its best to take profit]
